## Introduction :: CHINA

Background: ([../docs/notesanddefs.html?fieldkey=2028&term=Background](#)) ([../fields/2028.html#ch](#)) 

For centuries China stood as a leading civilization, outpacing the rest of the world in the arts and sciences, but in the 19th and early 20th centuries, the country was beset by civil unrest, major famines, military defeats, and foreign occupation. After World War II, the Communist Party of China under MAO Zedong established an autocratic socialist system that, while ensuring China's sovereignty, imposed strict controls over everyday life and cost the lives of tens of millions of people. After 1978, MAO's successor DENG Xiaoping and other leaders focused on market-oriented economic development and by 2000 output had quadrupled. For much of the population, living standards have improved dramatically but political controls remain tight. Since the early 1990s, China has increased its global outreach and participation in international organizations.

extremely diverse; tropical in south to subarctic in north

Terrain: ([../docs/notesanddefs.html?fieldkey=2125&term=Terrain](#)) ([../fields/2125.html#ch](#)) 

mostly mountains, high plateaus, deserts in west; plains, deltas, and hills in east

Elevation: ([../docs/notesanddefs.html?fieldkey=2020&term=Elevation](#)) ([../fields/2020.html#ch](#)) 

mean elevation: 1,840 m

elevation extremes: lowest point: Turpan Pendi -154 m

highest point: Mount Everest 8,848 m (highest peak in Asia and highest point on earth above sea level)

Natural resources: ([../docs/notesanddefs.html?fieldkey=2111&term=Natural resources](#)) ([../fields/2111.html#ch](#)) 

coal, iron ore, petroleum, natural gas, mercury, tin, tungsten, antimony, manganese, molybdenum, vanadium, magnetite, aluminum, lead, zinc, rare earth elements, uranium, hydropower potential (world's largest), arable land

Land use: ([../docs/notesanddefs.html?fieldkey=2097&term=Land use](#)) ([../fields/2097.html#ch](#)) 

agricultural land: 54.7%

arable land 11.3%; permanent crops 1.6%; permanent pasture 41.8%

forest: 22.3%

other: 23% (2011 est.)

Irrigated land: ([../docs/notesanddefs.html?fieldkey=2146&term=Irrigated land](#)) ([../fields/2146.html#ch](#)) 

690,070 sq km (2012)

Population - distribution: ([../docs/notesanddefs.html?fieldkey=2266&term=Population - distribution](#)) ([../fields/2266.html#ch](#)) 

overwhelming majority of the population is found in the eastern half of the country; the west, with its vast mountainous and desert areas, remains sparsely populated; though ranked first in the world in total population, overall density is less than that of many other countries in Asia and Europe; high population density is found along the Yangtze and Yellow River valleys, the Xi Jiang River delta, the Sichuan Basin (around Chengdu), in and around Beijing, and the industrial area around Shenyang

Natural hazards: ([../docs/notesanddefs.html?fieldkey=2021&term=Natural hazards](#)) ([../fields/2021.html#ch](#)) 

frequent typhoons (about five per year along southern and eastern coasts); damaging floods; tsunamis; earthquakes; droughts; land subsidence

volcanism: China contains some historically active volcanoes including Changbaishan (also known as Baitoushan, Baegdu, or P'aektu-san), Hainan Dao, and Kunlun although most have been relatively inactive in recent centuries

Environment - current issues: ([../docs/notesanddefs.html?fieldkey=2032&term=Environment - current issues](#)) ([../fields/2032.html#ch](#)) 

air pollution (greenhouse gases, sulfur dioxide particulates) from reliance on coal produces acid rain; China is the world's largest single emitter of carbon dioxide from the burning of fossil fuels; water shortages, particularly in the north; water pollution from untreated wastes; coastal destruction due to land reclamation, industrial development, and aquaculture; deforestation and habitat destruction; poor land management leads to soil erosion, landslides, floods, droughts, dust storms, and desertification; trade in endangered species

Environment - international agreements: ([./docs/notesanddefs.html?fieldkey=2033&term=Environment - international agreements](http://docs/notesanddefs.html?fieldkey=2033&term=Environment - international agreements)) ([../fields/2033.html#ch](http://fields/2033.html#ch))

party to: Antarctic-Environmental Protocol, Antarctic Treaty, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands, Whaling  
signed, but not ratified: none of the selected agreements

Geography - note: ([./docs/notesanddefs.html?fieldkey=2113&term=Geography - note](http://docs/notesanddefs.html?fieldkey=2113&term=Geography - note)) ([../fields/2113.html#ch](http://fields/2113.html#ch))

world's fourth largest country (after Russia, Canada, and US) and largest country situated entirely in Asia; Mount Everest on the border with Nepal is the world's tallest peak above sea level

## Economy :: CHINA

Economy - overview: ([../docs/notesanddefs.html?fieldkey=2116&term=Economy - overview](#)) ([../fields/2116.html#ch](#))

Since the late 1970s, China has moved from a closed, centrally planned system to a more market-oriented one that plays a major global role. China has implemented reforms in a gradualist fashion, resulting in efficiency gains that have contributed to a more than tenfold increase in GDP since 1978. Reforms began with the phaseout of collectivized agriculture, and expanded to include the gradual liberalization of prices, fiscal decentralization, increased autonomy for state enterprises, growth of the private sector, development of stock markets and a modern banking system, and opening to foreign trade and investment. China continues to pursue an industrial policy, state support of key sectors, and a restrictive investment regime. From 2013 to 2017, China had one of the fastest growing economies in the world, averaging slightly more than 7% real growth per year. Measured on a purchasing power parity (PPP) basis that adjusts for price differences, China in 2017 stood as the largest economy in the world, surpassing the US in 2014 for the first time in modern history. China became the world's largest exporter in 2010, and the largest trading nation in 2013. Still, China's per capita income is below the world average.

In July 2005 moved to an exchange rate system that references a basket of currencies. From mid-2005 to late 2008, the renminbi (RMB) appreciated more than 20% against the US dollar, but the exchange rate remained virtually pegged to the dollar from the onset of the global financial crisis until June 2010, when Beijing announced it would resume a gradual appreciation. From 2013 until early 2015, the renminbi held steady against the dollar, but it depreciated 13% from mid-2015 until end-2016 amid strong capital outflows; in 2017 the RMB resumed appreciating against the dollar – roughly 7% from end-of-2016 to end-of-2017. In 2015, the People’s Bank of China announced it would continue to carefully push for full convertibility of the renminbi, after the currency was accepted as part of the IMF’s special drawing rights basket. However, since late 2015 the Chinese Government has strengthened capital controls and oversight of overseas investments to better manage the exchange rate and maintain financial stability.

The Chinese Government faces numerous economic challenges including: (a) reducing its high domestic savings rate and correspondingly low domestic household consumption; (b) managing its high corporate debt burden to maintain financial stability; (c) controlling off-balance sheet local government debt used to finance infrastructure stimulus; (d) facilitating higher-wage job opportunities for the aspiring middle class, including rural migrants and college graduates, while maintaining competitiveness; (e) dampening speculative investment in the real estate sector without sharply slowing the economy; (f) reducing industrial overcapacity; and (g) raising productivity growth rates through the more efficient allocation of capital and state-support for innovation. Economic development has progressed further in coastal provinces than in the interior, and by 2016 more than 169.3 million migrant workers and their dependents had relocated to urban areas to find work. One consequence of China’s population control policy known as the “one-child policy” - which was relaxed in 2016 to permit all families to have two children - is that China is now one of the most rapidly aging countries in the world. Deterioration in the environment - notably air pollution, soil erosion, and the steady fall of the water table, especially in the North - is another long-term problem. China continues to lose arable land because of erosion and urbanization. The Chinese Government is seeking to add energy production capacity from sources other than coal and oil, focusing on natural gas, nuclear, and clean energy development. In 2016, China ratified the Paris Agreement, a multilateral agreement to combat climate change, and committed to peak its carbon dioxide emissions between 2025 and 2030.

The government’s 13th Five-Year Plan, unveiled in March 2016, emphasizes the need to increase innovation and boost domestic consumption to make the economy less dependent on government investment, exports, and heavy industry. However, China has made more progress on subsidizing innovation than rebalancing the economy. Beijing has committed to giving the market a more decisive role in allocating resources, but the Chinese Government’s policies continue to favor state-owned enterprises and emphasize stability. Chinese leaders in 2010 pledged to double China’s GDP by 2020, and the 13th Five Year Plan includes annual economic growth targets of at least 6.5% through 2020 to achieve that goal. In recent years, China has renewed its support for state-owned enterprises in sectors considered important to “economic security,” explicitly looking to foster globally competitive industries. Chinese leaders also have undermined some market-oriented reforms by reaffirming the “dominant” role of the state in the economy, a stance that threatens to discourage private initiative and make the economy less efficient over time. The slight acceleration in economic growth in 2017—the first such uptick since 2010—gives Beijing more latitude to pursue its economic reforms, focusing on financial sector deleveraging and its Supply-Side Structural Reform agenda, first announced in late 2015.

Telephone system: (../docs/notesanddefs.html?fieldkey=2124&term=Telephone system) (../fields/2124.html#ch)

general assessment: domestic and international services are available for private use; unevenly distributed domestic system serves principal cities, industrial centers, and many towns; China continues to develop its telecommunications infrastructure; China in the summer of 2008 began a major restructuring of its telecommunications industry, resulting in the consolidation of its six telecom service operators to three, China Telecom, China Mobile, and China Unicom, each providing both fixed-line and mobile services (2016)

domestic: interprovincial fiber-optic trunk lines and cellular telephone systems have been installed; mobile-cellular subscribership is increasing rapidly; the number of Internet users now over 55% of the population; a domestic satellite system with several earth stations is in place (2018)

international: country code - 86; a number of submarine cables provide connectivity to Asia, the Middle East, Europe, and the US; satellite earth stations - 7 (5 Intelsat - 4 Pacific Ocean and 1 Indian Ocean; 1 Intersputnik - Indian Ocean region; and 1 Inmarsat - Pacific and Indian Ocean regions) (2012)

Broadcast media: (../docs/notesanddefs.html?fieldkey=2213&term=Broadcast media) (../fields/2213.html#ch)

all broadcast media are owned by, or affiliated with, the Communist Party of China or a government agency; no privately owned TV or radio stations; state-run Chinese Central TV, provincial, and municipal stations offer more than 2,000 channels; the Central Propaganda Department sends directives to all domestic media outlets to guide

### **Transnational Issues :: CHINA**

Disputes - international: (../docs/notesanddefs.html?fieldkey=2070&term=Disputes - international) (../fields/2070.html#ch)

continuing talks and confidence-building measures work toward reducing tensions over Kashmir that nonetheless remains militarized with portions under the de facto administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir and Northern Areas); India does not recognize Pakistan's ceding historic Kashmir lands to China in 1964; China and India continue their security and foreign policy dialogue started in 2005 related to the dispute over most of their rugged, militarized boundary, regional nuclear proliferation, and other matters; China claims most of India's Arunachal Pradesh to the base of the Himalayas; lacking any treaty describing the boundary, Bhutan and China continue negotiations to establish a common boundary alignment to resolve territorial disputes arising from substantial cartographic discrepancies, the most contentious of which lie in Bhutan's west along China's Chumbi salient; Burmese forces attempting to dig in to the largely autonomous Shan State to rout local militias tied to the drug trade, prompts local residents to periodically flee into neighboring Yunnan Province in China; Chinese maps show an international boundary symbol off the coasts of the littoral states of the South China Seas, where China has interrupted Vietnamese hydrocarbon exploration; China asserts sovereignty over Scarborough Reef along with the Philippines and Taiwan, and over the Spratly Islands together with Malaysia, the Philippines, Taiwan, Vietnam, and Brunei; the 2002 Declaration on the Conduct of Parties in the South China Sea eased tensions in the Spratlys but is not the legally binding code of conduct sought by some parties; Vietnam and China continue to expand construction of facilities in the Spratlys and in March 2005, the national oil companies of China, the Philippines, and Vietnam signed a joint accord on marine seismic activities in the Spratly Islands;

China occupies some of the Paracel Islands also claimed by Vietnam and Taiwan; the Japanese-administered Senkaku Islands are also claimed by China and Taiwan; certain islands in the Yalu and Tumen Rivers are in dispute with North Korea; North Korea and China seek to stem illegal migration to China by North Koreans, fleeing privations and oppression, by building a fence along portions of the border and imprisoning North Koreans deported by China; China and Russia have demarcated the once disputed islands at the Amur and Ussuri confluence and in the Argun River in accordance with their 2004 Agreement; China and Tajikistan have begun demarcating the revised boundary agreed to in the delimitation of 2002; the decade-long demarcation of the China-Vietnam land boundary was completed in 2009; citing environmental, cultural, and social concerns, China has reconsidered construction of 13 dams on the Salween River, but, as of 2016, energy-starved Burma, with backing from Thailand, remained intent on building seven hydro-electric dams downstream despite regional and international protests

Chinese and Hong Kong authorities met in March 2008 to resolve ownership and use of lands recovered in Shenzhen River channelization, including 96-hectare Lok Ma Chau Loop

Refugees and internally displaced persons: (../docs/notesanddefs.html?fieldkey=2194&term=Refugees and internally displaced persons) (../fields/2194.html#ch)

refugees (country of origin): 317,098 (Vietnam); undetermined (North Korea) (2016)

IDPs: undetermined (2014)

Trafficking in persons: (../docs/notesanddefs.html?fieldkey=2196&term=Trafficking in persons) (../fields/2196.html#ch)

current situation: China is a source, transit, and destination country for men, women, and children subjected to sex trafficking and forced labor; Chinese adults and children are forced into prostitution and various forms of forced labor, including begging and working in brick kilns,

coal mines, and factories; women and children are recruited from rural areas and taken to urban centers for sexual exploitation, often lured by criminal syndicates or gangs with fraudulent job offers; state-sponsored forced labor, where detainees work for up to four years often with no remuneration, continues to be a serious concern; Chinese men, women, and children also may be subjected to conditions of sex trafficking and forced labor worldwide, particularly in overseas Chinese communities; women and children are trafficked to China from neighboring countries, as well as Africa and the Americas, for forced labor and prostitution

tier rating: Tier 2 Watch List - China does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; official data for 2014 states that 194 alleged traffickers were arrested and at least 35 were convicted, but the government's conflation of human trafficking with other crimes makes it difficult to assess law enforcement efforts to investigate and to prosecute trafficking offenses according to international law; despite reports of complicity, no government officials were investigated, prosecuted, or convicted for their roles in trafficking offenses; authorities did not adequately protect victims and did not provide the data needed to ascertain the number of victims identified or assisted or the services provided; the National People's Congress ratified a decision to abolish "reform through labor" in 2013, but some continued to operate as state-sponsored drug detention or "custody and education" centers that force inmates to perform manual labor; some North Korean refugees continued to be forcibly repatriated as illegal economic migrants, despite reports that some were trafficking victims (2015)

Illicit drugs: (../docs/notesanddefs.html?fieldkey=2086&term=Illicit drugs) (../fields/2086.html#ch)

major transshipment point for heroin produced in the Golden Triangle region of Southeast Asia; growing domestic consumption of synthetic drugs, and heroin from Southeast and Southwest Asia; source country for methamphetamine and heroin chemical precursors, despite new regulations on its large chemical industry; more people believed to be convicted and executed for drug offences than anywhere else in the world, according to NGOs
